Blinkit Customer Feedback Analysis

Using SQL and Power BI to transform customer feedback into actionable business insights

Project Overview

Objectives

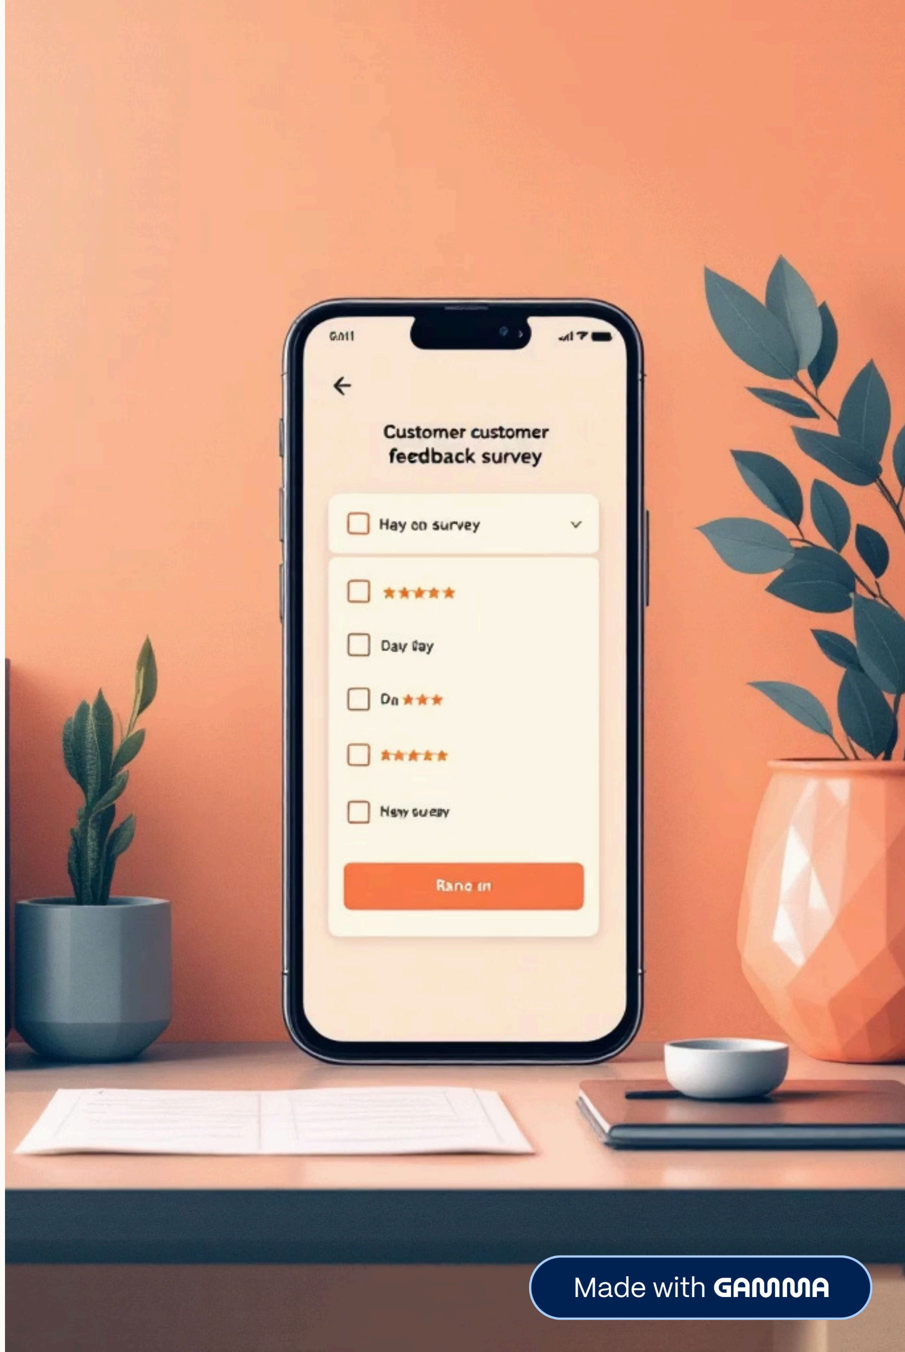
Analyze feedback data, measure satisfaction, identify trends, and build interactive dashboards

Dataset

Blinkit customer feedback with ratings, categories, and sentiment analysis

Outcome

Actionable insights to improve business performance and customer satisfaction



Tools & Technologies

MySQL

Data storage and querying for efficient data management

Power BI

Interactive data visualization and dashboard creation

CSV Dataset

Raw data source containing customer feedback

Dataset Structure

The feedback dataset contains six key fields that capture comprehensive customer insights:

01

feedback_id

Unique feedback identifier

02

customer_id

Customer identifier

03

rating

Rating scale from 1 to 5

04

feedback_text

Customer review details

05

feedback_cat

Category classification

06

sentiment

Positive, negative, or neutral classification

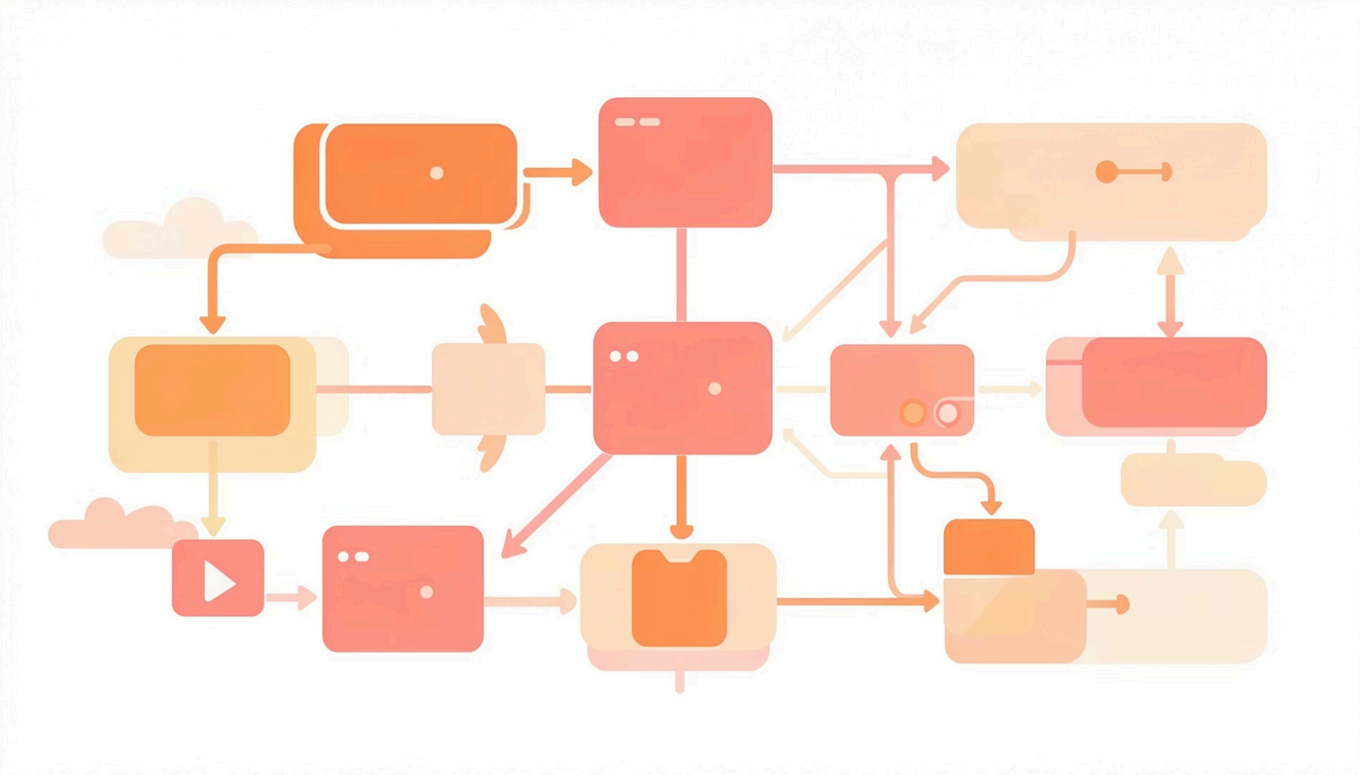
Database Creation

SQL Implementation

Created database and table structure to store customer feedback data efficiently.

```
CREATE DATABASE blinkit_feedback;
USE blinkit_feedback;

CREATE TABLE feedback (
  feedback_id INT PRIMARY KEY,
  customer_id INT,
  rating INT,
  feedback_text TEXT,
  feedback_cat VARCHAR(50),
  sentiment VARCHAR(20)
);
```



SQL Analysis Queries

Average Rating

```
SELECT AVG(rating)
FROM feedback;
```

Sentiment Distribution

```
SELECT sentiment,
  COUNT(*)
FROM feedback
GROUP BY sentiment;
```

Category Performance

```
SELECT feedback_cat,
  AVG(rating)
FROM feedback
GROUP BY feedback_cat;
```

Problem Areas

```
SELECT feedback_cat,
 COUNT(*)
FROM feedback
WHERE sentiment='Negative'
GROUP BY feedback_cat;
```

Power BI Dashboard

Donut Chart

Sentiment Distribution

Bar Chart

Category-wise Rating

Column Chart

Problem Area Detection

Histogram

Rating Distribution

KPI Cards

Key metrics display

Key Insights

Positive Feedback

Majority of feedback is positive, indicating good customer satisfaction

Delivery Issues

Delivery category has the highest negative feedback → major issue

Product Quality

Product quality is relatively better than service

Rating Distribution

Most ratings are between 3 to 5, showing moderate to high satisfaction

Business Recommendations

Improve Delivery

Enhance speed and logistics

Strengthen Support

Improve customer service

Maintain Quality

Ensure consistency

Reduce Negatives

Focus on feedback

Conclusion

This project demonstrates how customer feedback data can be analyzed using SQL and Power BI to extract meaningful insights and improve business decision-making.

By combining efficient data querying with powerful visualization, businesses can transform raw feedback into actionable strategies that drive customer satisfaction and operational excellence.
